

# Deliver a Better Mobile Experience

Your customers expect to connect seamlessly and simply from any device at any time. MyMeter confidently delivers a better mobile experience, with any customer information system (CIS).

## Provide a native app, not a wrap

Unlike other providers who render their services as a web page onto a mobile device, we've built a native mobile application to provide everything your customers can do on the web, in an easy-to-use, native app for Apple and Android.

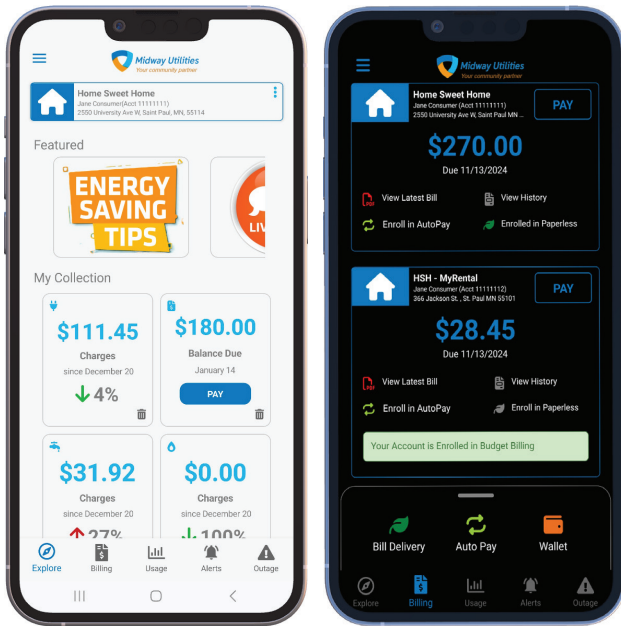

## Stay relevant

The future of digital customer service is mobile. In fact, 85% of consumers prefer a mobile app over a website for service and commerce. With our mobile-first approach, MyMeter leads the industry in providing a digital experience proven to raise customer satisfaction scores while reducing customer service costs.

# Stay Connected

Using our mobile app or the web portal, utilities can easily interact with customers, notify them about account activity, and receive customer alerts about any concerns.

## Offer More Features

- Push notifications
- Bill pay and bill presentment
- Water leak notifications
- Water quality and outage reporting and notifications
- Irrigation information and alerts
- Service charges and service requests
- Consumption comparison and analysis
- High bill alerts
- High usage alerts

A true SaaS delivery means your software is always current with the latest technology release.

A comprehensive suite of software options meets the needs of utilities of all types and sizes.

The industry's most robust AMI data presentation engine, because meter data is at the heart of all customer service.

A team of experts who love their work and take pride in delighting clients
